

**Comparative Evaluation of Net Effects and Ranking – Section S2**

Evaluation Factors and Sub-Factors	Alternative S2-1	Alternative S2-2 - Preferred
Summary of Potential Net Effects and Ranking		
1.0 Natural Environment		
1.1 Fish and Fish Habitat		
1.1.1 Fish Habitat	<p>Standard net effects to watercourses as outlined in the accompanying memo at the following:</p> <p><b>11 watercourses:</b></p> <ul style="list-style-type: none"> <li>• 1 main stem river crossing (Credit River, 0.3 km), baitfish and trout migration</li> <li>• 1 permanent tributary (assumed coldwater), salmon spawning and/or rearing</li> <li>• 2 permanent tributaries (1 warmwater 0.3 km, unconfirmed fish community – Levi Creek, contributing habitat for Redside Dace downstream; and 1 coolwater 0.8 km, confirmed baitfish)</li> <li>• 1 intermittent watercourse (warmwater), unconfirmed fish community</li> <li>• 6 ephemeral headwater features, not fish habitat</li> </ul> <p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, offsetting / enhancement measures; until confirmed, net effects remain the same as potential effects:</p> <ul style="list-style-type: none"> <li>• Crossing the main stem Credit River containing trout migration, effects may be minimal following standard design/construction mitigation.</li> <li>• Majority of tributary identified as trout specialized habitat (i.e. spawning and/or rearing) would be enclosed under alignment unless tributary can be realigned depending on the design of the interchange and associated ramps</li> <li>• Crossing permanent tributary parallel within alignment, possibly requiring ~800 m of realignment.</li> </ul> <p align="center"><b>HIGH NET EFFECT</b> <b>RANKING: 2<sup>nd</sup></b></p> <p>This alternative crosses the greatest number of permanent water courses including a tributary contributing to Redside Dace habitat that runs parallel within the alternative, and a permanent tributary with salmonid spawning/rearing habitat. Mitigation of impacts to these features would be challenging.</p>	<p>Standard net effects to watercourses as outlined in the accompanying memo at the following:</p> <p><b>14 watercourses:</b></p> <ul style="list-style-type: none"> <li>• 1 main stem river crossing (Credit River, 0.3 km), baitfish and trout migration</li> <li>• 1 permanent, watercourse identified as Redside Dace Recovery Habitat (Levi Creek)</li> <li>• 1 permanent tributary (to Levi Creek) coolwater, unconfirmed fish community (contributing habitat for Redside Dace)</li> <li>• 5 intermittent watercourses, unconfirmed fish community (1 of which is contributing habitat for Redside Dace)</li> <li>• 6 ephemeral headwater features (associated with Levi and Credit Rivers; 1 ephemeral oxbow scar at the Credit River)</li> </ul> <p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, offsetting / enhancement measures; until confirmed, net effects remain the same as potential effects:</p> <ul style="list-style-type: none"> <li>• Crossing the main stem Credit River containing trout migration in addition to supporting American Eel habitat / migration route, effects may be minimal following standard design/construction mitigation</li> <li>• Crossing Redside Dace recovery habitat can be done with minimal effects, mitigated following MNRFF guidance document</li> </ul> <p align="center"><b>MODERATE NET EFFECT</b> <b>RANKING: 1<sup>st</sup></b></p> <p>This alternative crosses fewer permanent watercourses and does not impact sensitive salmonid spawning/rearing habitat. The one crossing of recovery habitat for Redside Dace is slightly skewed but can be mitigated following MNRFF guidance document and discussions with MECP. Potential complex design / impacts at the interchange for the network of drainage features contributing to Redside Dace recovery habitat downstream. Overall, impacts to watercourses are more easily mitigated in this alternative.</p>
1.1.2 Fish Community	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, offsetting / enhancement measures; until confirmed, net effects remain the same as potential effects:</p> <ul style="list-style-type: none"> <li>• Crossing parallel tributary possibly ~800 m realignment</li> <li>• Crossing parallel tributary identified as trout spawning and/or rearing, realignment likely prohibitive, potential for full enclosure.</li> <li>• Crossing Credit River trout/salmon migration corridor in addition to supporting American Eel habitat / migration route and habitat for Atlantic Salmon</li> <li>• 2 crossings of contributing habitat for Redside Dace</li> </ul> <p align="center"><b>HIGH NET EFFECT</b> <b>RANKING: 2<sup>nd</sup></b></p> <p>This alternative impacts sensitive salmonid species in spawning / rearing habitat, and potentially impacts Redside Dace by contributing to habitat downstream. Also impacts a relatively long reach of permanent watercourse supporting moderately sensitive coolwater species within (not perpendicular to) alignment.</p>	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, offsetting / enhancement measures; until confirmed, net effects remain the same as potential effects:</p> <ul style="list-style-type: none"> <li>• Crossing of the 1 permanent Redside Dace Recovery habitat watercourse at slight skew may result in slightly increased net effects</li> <li>• Crossing Credit River trout/salmon migration corridor in addition to supporting American Eel habitat / migration route and Atlantic Salmon habitat</li> </ul> <p align="center"><b>MODERATE NET EFFECT</b> <b>RANKING: 1<sup>st</sup></b></p> <p>With appropriate mitigation at Redside Dace crossing, no significant impacts to sensitive fish communities. Crossing of the Credit River could likely be designed to have minimal negative impacts to fish and fish habitat and have limited impact on American Eel habitat / migration route and Atlantic Salmon habitat.</p>
1.2 Terrestrial Ecosystems		

Evaluation Factors and Sub-Factors	Alternative S2-1	Alternative S2-2 - Preferred
1.2.1 Wildlife and Wildlife Habitat	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects. Large portions of small existing wildlife habitats will be removed.</p> <p>Net effects include:</p> <ul style="list-style-type: none"> <li>• Permanent loss of wildlife habitat including habitat for Species at Risk (SAR) and Species of Conservation Concern (SCC), confirmed Significant Wildlife Habitat (SWH) and other areas for breeding and rearing of young (e.g. amphibian breeding habitat)</li> <li>• Reduction of wildlife habitat quality through indirect effects that cannot be fully mitigated including edge effects (e.g. increased light and noise and the introduction of pathways for invasive species) and increased potential for animal-vehicle collisions</li> <li>• Removals through this alternative would represent ~19.8 ha losses, or complete removal for many habitat patches.</li> <li>• Removals would result in major fragmentation and edge effects for most patches. Loss of habitat would affect critical life stages through by removing habitat requirements (e.g. wetlands for amphibian breeding, forests for bat maternity colonies, etc.)</li> </ul> <p style="text-align: center;"><b>MODERATE NET EFFECT</b> <b>RANKING: 1<sup>st</sup></b></p>	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects. Large portions of small existing wildlife habitats will be removed.</p> <p>Net effects include:</p> <ul style="list-style-type: none"> <li>• Permanent loss of wildlife habitat including confirmed habitat for Species at Risk (SAR) and Species of Conservation Concern (SCC), large tracts of confirmed SWH and other areas for breeding and rearing of young (e.g. amphibian breeding habitat)</li> <li>• Removals through this alternative would represent ~21.1 ha losses, or complete removal for many habitat patches.</li> <li>• Removals would result in major fragmentation and edge effects for most patches. Loss of habitat would affect critical life stages through by removing habitat requirements (e.g. wetlands for amphibian breeding, forests for bat maternity colonies, etc.).</li> </ul> <p style="text-align: center;"><b>HIGH NET EFFECT</b> <b>RANKING: 2<sup>nd</sup></b></p>
1.2.2 Wetlands	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects. Portions of large existing wetland communities will be removed.</p> <p>Net effects include:</p> <ul style="list-style-type: none"> <li>• Removal of 2.2 ha of wetland, of which ~2.1 ha is PSW</li> <li>• The largest wetland in this section is Levi's Creek Wetland Complex (CR-LC-52) - this wetland will be insignificantly affected by this alternative, removing ~1.9 ha of this feature.</li> <li>• Churchville-Norval Wetland Complex will also be insignificantly affected by this alternative, removing ~0.3 ha of this feature.</li> <li>• The unevaluated wetland patch will be significantly affected by this alternative where ~0.05 ha will be removed from this feature.</li> <li>• Reduction in wetland quality through indirect effects that cannot be fully mitigated including edge effects (e.g. increased light, wind, road contaminants and the introduction of pathways for invasive species) and impacts to hydrologic and groundwater inputs that support these features</li> </ul> <p style="text-align: center;"><b>MODERATE NET EFFECT</b> <b>RANKING: 1<sup>st</sup></b></p>	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects. Small portions of large existing communities will be removed.</p> <p>Net effects include:</p> <ul style="list-style-type: none"> <li>• This alternative will affect ~6.1 ha of wetland, of which ~5.4 ha is PSW. Impacts to features are moderate with removal of wetland communities.</li> <li>• Levi's Creek Wetland Complex will be insignificantly affected by this alternative, removing ~3.5 ha of this feature.</li> <li>• Churchville-Norval Wetland Complex will also be insignificantly affected by this alternative, removing ~1.9 ha of this feature.</li> <li>• The unevaluated wetland patch will be moderately affected where ~0.7 ha will be partially removed.</li> <li>• Reduction in wetland quality through Indirect effects that cannot be fully mitigated including edge effects (e.g. increased light, wind, road contaminants and the introduction of pathways for invasive species) and impacts to hydrologic and groundwater inputs that support these features</li> </ul> <p style="text-align: center;"><b>MODERATE NET EFFECT</b> <b>RANKING: 2<sup>nd</sup></b></p>
1.2.3 Woodlands and Vegetation	<p>Net effects associated with the alternatives are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects. Opportunities for reducing net effects are limited to off-site compensation.</p> <p>Net effects include:</p>	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects. Opportunities for reducing net effects are limited to off-site compensation.</p> <p>Net effects include:</p>
	<p style="text-align: center;">Both alternatives affect PSW and unevaluated wetlands. This alternative will affect a smaller area and fewer wetland patches.</p>	<p style="text-align: center;">Both alternatives affect PSW and unevaluated wetlands. This alternative will affect a greater area with more wetland patches.</p>

Evaluation Factors and Sub-Factors	Alternative S2-1	Alternative S2-2 - Preferred
	<p style="text-align: center;"><b>Summary of Potential Net Effects and Ranking</b></p> <ul style="list-style-type: none"> <li>Removal of ~17.7 ha of vegetation communities including deciduous forest, mixed forest, cultural woodland and meadow</li> <li>No interior woodland habitat is impacted by this alternative.</li> <li>Two potentially significant woodlands encompassing ~8.3 ha is affected by this alternative associated with Credit River (Patch CR-NP-55 and CR-NP-63).</li> <li>No interior woodland habitat is affected by this alternative.</li> <li>One potentially significant valley land associated with the Credit River is affected by this alternative.</li> <li>Reduction in vegetation community quality through indirect effects that cannot be fully mitigated including effects from road contaminants (e.g. salt, heavy metals, sediment / debris), introduction of pathways for invasive species, edge / exposure impacts (e.g. canopy blow down)</li> </ul> <p>Large woodland and other vegetated communities associated with the Credit River and Levi's Creek represent the majority of remaining patches of natural vegetation in the general landscape.</p> <p style="text-align: center;"><b>MODERATE NET EFFECT</b> <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Both alternatives affect woodland and other communities. This alternative will affect a smaller area of less contiguous woodland features.</p>	<ul style="list-style-type: none"> <li>Removal of ~19.8 ha of vegetation communities including deciduous forest, mixed forest, deciduous swamp and meadow</li> <li>One potentially significant woodland (~4.7 ha removal) is affected by this alternative associated with Credit River (Patch CR-NP-55 and CR-NP-63).</li> <li>No interior woodland habitat is impacted by this alternative.</li> <li>One potentially significant valley land associated with the Credit River is affected by this alternative.</li> <li>Reduction in vegetation community quality through Indirect effects that cannot be fully mitigated including effects from road contaminants (e.g. salt, heavy metals, sediment / debris), introduction of pathways for invasive species, edge / exposure impacts (e.g. canopy blow down)</li> </ul> <p>Large woodland and other vegetated communities associated with the Credit River and Levi's Creek represent the majority of remaining patches of natural vegetation in the general landscape. This alternative will affect larger, more contiguous woodland patches.</p> <p style="text-align: center;"><b>HIGH NET EFFECT</b> <b>RANKING: 2<sup>nd</sup></b></p> <p style="text-align: center;">Both alternatives affect woodland and other communities. This alternative will affect a greater area of contiguous woodland features.</p>
1.2.4 Designated/Special/Natural Areas	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects.</p> <p>Net effects include:</p> <ul style="list-style-type: none"> <li>There are no ESA, ESPAs, ANSI or other designated areas within this alternative.</li> <li>There are no national or provincial parks within this alternative.</li> <li>There are no Conservation Authority lands within this alternative.</li> <li>This alternative is within the Greenbelt Plan Area – Natural Heritage System, ~461 m (~15 ha) of the alternative</li> </ul> <p>Net effects include removals of portions of Peel Region 'Core Areas of Greenlands System' and Region of Halton Key Features including fragmentation of two minor riparian zones and complete removal of an associated woodlot, and edge removal for one woodlot as described in sections above.</p> <p style="text-align: center;"><b>MODERATE NET EFFECT</b> <b>RANKING: 2<sup>nd</sup></b></p> <p style="text-align: center;">Effect to Greenlands. Both alternatives have the potential to affect Key Features. This alternative will result in greater area of Key Features removed.</p>	<p>Net effects associated with the alternative are dependent on the ability to implement avoidance, mitigation, compensation / enhancement measures; until confirmed, net effects remain the same as potential effects.</p> <p>Net effects include:</p> <ul style="list-style-type: none"> <li>There are no ESA, ESPAs, ANSI or other designated areas within this alternative.</li> <li>There are no national or provincial parks within this alternative.</li> <li>There are no Conservation Authority lands within this alternative.</li> <li>This alternative is within the Greenbelt Plan Area – Natural Heritage System, ~343 m (~11 ha) of the alternative</li> </ul> <p>Net effects include removals of portions of Peel Region 'Core Areas of Greenlands System' including fragmentation and removal of forest for a significant riparian corridor (~0.7 km width) and a riparian area of ~0.5 km width as described in the sections above. Areas of removal are relatively less than the other alternative.</p> <p style="text-align: center;"><b>LOW NET EFFECT</b> <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Effect to Greenlands. Both alternatives have the potential to affect Key Features. This alternative will result in less area of Key Features removed.</p>
1.3 Ecosystem Services	<p><b>Relative ES Value</b></p> <ul style="list-style-type: none"> <li>Agriculture: Moderate</li> <li>Natural Cover: High</li> <li>Cumulative: Moderate</li> </ul> <p><b>ES Value Representation</b></p> <ul style="list-style-type: none"> <li>Agriculture: 24%</li> <li>Natural Cover: 76%</li> </ul> <p style="text-align: center;"><b>MODERATE NET EFFECT</b> <b>RANKING: 2<sup>nd</sup></b></p>	<p><b>Relative ES Value</b></p> <ul style="list-style-type: none"> <li>Agriculture: Low</li> <li>Natural Cover: Moderate</li> <li>Cumulative: Moderate</li> </ul> <p><b>ES Value Representation</b></p> <ul style="list-style-type: none"> <li>Agriculture: 21%</li> <li>Natural Cover: 79%</li> </ul> <p style="text-align: center;"><b>MODERATE NET EFFECT</b> <b>RANKING: 1<sup>st</sup></b></p>

Evaluation Factors and Sub-Factors	Alternative S2-1	Alternative S2-2 - Preferred
Summary of Potential Net Effects and Ranking		
	While both alternatives have an overall moderate net effect using the Ecosystem Service (ES) Net Effects weighting, both land use ES value categories were higher for S2-1 than S2-2, making this alternative less preferred.	While both alternatives have an overall moderate net effect using the Ecosystem Service (ES) Net Effects weighting, both land use ES value categories were lower for S2-2 than S2-1 making this the preferred alternative.
<b>1.4 Groundwater</b>		
1.4.1 Areas of Groundwater Recharge or Discharge	<ul style="list-style-type: none"> <li>Small loss of recharge due to footprint and small loss of discharge due to interception.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>	<ul style="list-style-type: none"> <li>Small loss of recharge due to footprint and small loss of discharge due to interception.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>
1.4.2 Groundwater Source Areas and Wellhead Protection Areas	<ul style="list-style-type: none"> <li>No Net Effects</li> </ul> <p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>	<ul style="list-style-type: none"> <li>No Net Effects</li> </ul> <p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>
1.4.3 Large Volume Wells	<ul style="list-style-type: none"> <li>No Net Effects.</li> </ul> <p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>	<ul style="list-style-type: none"> <li>No net effects.</li> </ul> <p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>
1.4.4 Private Wells	<ul style="list-style-type: none"> <li>Potential reduction in water quality within the shallow aquifer in at least 17 wells due to potential salt issue only.</li> <li>At least 5 wells are to be removed/decommissioned by alternative.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">This alternative has fewer shallow wells and less wells to be decommissioned.</p>	<ul style="list-style-type: none"> <li>Potential reduction in water quality within the shallow aquifer in at least 20 wells due to potential salt issue only.</li> <li>At least 14 wells are to be removed/decommissioned by alternative.</li> </ul> <p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 2<sup>nd</sup></b></p> <p style="text-align: center;">This alternative has more shallow wells and more wells to be decommissioned.</p>
1.4.5 Groundwater-Dependent Commercial Enterprises	<ul style="list-style-type: none"> <li>One commercial use and wells displaced.</li> </ul> <p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 2<sup>nd</sup></b></p> <p style="text-align: center;">This alternative includes the presence of a commercial well.</p>	<ul style="list-style-type: none"> <li>No commercial use and wells displaced.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">No commercial wells present in this alternative.</p>
1.4.6 Groundwater-Sensitive Ecosystems	<ul style="list-style-type: none"> <li>Low potential to affect sensitive ecosystems with wetland areas in buffer zone and warmwater streams that are not highly dependent on groundwater. Some loss of discharge function anticipated.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>	<ul style="list-style-type: none"> <li>Low potential to affect sensitive ecosystems with wetland areas in buffer zone and warmwater streams that are not highly dependent on groundwater. Some loss of discharge function anticipated.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Same Net Effect</p>
<b>1.5 Surface Water</b>		
1.5.1 Watershed / Subwatershed Drainage Features / Patterns	<ul style="list-style-type: none"> <li>Perpendicular crossings will not be an issue and can be accommodated using culverts. There may be an opportunity in the headwaters of Levi Creek to combine some adjacent features to reduce the number of culverts.</li> <li>Long realignments are going to be required as tributaries of Levi Creek and East Sixteen Mile Creek are beneath the footprint of the roadway.</li> <li>10<sup>th</sup> Line interchange results in a significant impact.</li> <li>Bovaird interchange results in a moderate impact.</li> </ul>	<ul style="list-style-type: none"> <li>While there are a number of crossings, there is one significant crossing over Levi Creek and another over the Credit River. The impacts are mitigatable or avoidable in all cases.</li> <li>The Winston Churchill Blvd. interchange, while not ideally situated, is mitigatable and/or avoidable through interchange design or repositioning.</li> </ul>

Evaluation Factors and Sub-Factors	Alternative S2-1	Alternative S2-2 - Preferred
Summary of Potential Net Effects and Ranking		
	<p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 2<sup>nd</sup></b></p> <p style="text-align: center;">More challenging impacts on crossings; interchanges are problematic due to proximity to watercourses.</p>	<p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Minimal impacts compared to S2-1.</p>
1.5.2 Surface Water Quality and Quantity	<ul style="list-style-type: none"> <li>• Introduces 53 ha of impervious area, including 21 ha to East Sixteen Mile Creek watershed, 24 ha to Levi Creek watershed and 7 ha to the main branch of Credit River;</li> <li>• Realignment of regulated watercourse approximately 760 m (tributary of East 16 Mile Creek);</li> <li>• Medium impacts on quality through direct and indirect discharges of contaminated and sediment-laden run-off, thermal impact on the coolwater system;</li> <li>• Medium impacts on hydrology due to changes in ground permeability;</li> <li>• High effects on modifications to surface drainage patterns and alterations of water bodies.</li> </ul> <p style="text-align: center;">HIGH NET EFFECT <b>RANKING: 2<sup>nd</sup></b></p> <p style="text-align: center;">Larger impervious area; realignment of regulated watercourse resulting in potential alteration to drainage pattern.</p>	<ul style="list-style-type: none"> <li>• Introduces 44 ha of impervious area, including 4 ha to East Sixteen Mile Creek watershed, 10 ha to Mullet Creek watershed, 20 ha to Levi Creek watershed and 10 ha to the main branch of Credit River;</li> <li>• Medium impacts on quality through direct and indirect discharges of contaminated and sediment-laden run-off, thermal impact on the coolwater system.</li> <li>• Medium impacts on hydrology due to changes in ground permeability.</li> <li>• Medium effects on modifications to surface drainage patterns and alterations of water bodies.</li> </ul> <p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Smaller impervious area.</p>
<b>1.6 Air Quality and Climate Change</b>		
1.6.1 Local and regional air quality impacts; greenhouse gas emissions	<ul style="list-style-type: none"> <li>• Some residences on 9<sup>th</sup> Line, Embleton Rd., 10<sup>th</sup> Line and Winston Churchill Blvd. are anticipated to be close enough to the GTAW to experience a change in air quality; however, air pollutants will remain within acceptable levels.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 2<sup>nd</sup></b></p> <p style="text-align: center;">Approximately the same number of affected residences as S2-2, but contributes to a longer overall corridor length.</p>	<ul style="list-style-type: none"> <li>• Some residences on 10<sup>th</sup> Line, Embleton Rd., Winston Churchill Blvd. and Heritage Rd. are anticipated to be close enough to the GTAW to experience a change in air quality; however, air pollutants will remain within acceptable levels.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">Approximately the same number of affected residences as S2-1, but this alternative also contributes to the shortest overall corridor length, thus reducing the contribution to regional emissions of GHG and air pollutants.</p>
<b>2.0 Land Use / Socio-Economic Environment</b>		
<b>2.1 Land Use Planning Policies, Goals, Objectives</b>		
2.1.1 Indigenous Land Claims	<p>Treaties including Nanfan (1701), Treaty 3 (1795), Treaty 3.75 (1795), Treaty 13 (1805), Treaty 13A (1805), Treaty 18, 1818, Treaty 19 (1918), Williams Treaty (1923), as well as various Assertions and Claims.</p> <ul style="list-style-type: none"> <li>• Additional Indigenous Assertions and/or Claims may be filed and/or proven at any time.</li> </ul> <p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">No difference between alternatives.</p>	<p>Treaties including Nanfan (1701), Treaty 3 (1795), Treaty 3.75 (1795), Treaty 13 (1805), Treaty 13A (1805), Treaty 18, 1818, Treaty 19 (1918), Williams Treaty (1923), as well as various Assertions and Claims.</p> <ul style="list-style-type: none"> <li>• Additional Indigenous Assertions and/or Claims may be filed and/or proven at any time.</li> </ul> <p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">No difference between alternatives.</p>
2.1.2 Provincial / Federal Land Use Planning Policies / Goals / Objectives	<ul style="list-style-type: none"> <li>• Impacts PPS agricultural lands and public space and recreation policies.</li> <li>• Impacts 149 hectares of Agricultural Lands.</li> <li>• Impacts 12 hectares of Greenbelt lands Protected Countryside – Natural Heritage System.</li> <li>• Impacts 36 hectares of Environmental Policy Area.</li> <li>• Impacts Agricultural System to greatest extent.</li> </ul> <p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 2<sup>nd</sup></b></p>	<ul style="list-style-type: none"> <li>• Impacts PPS agricultural and employment lands and housing policies.</li> <li>• Impacts 74 hectares of Agricultural Lands.</li> <li>• Impacts 11 hectares of Greenbelt lands Protected Countryside – Natural Heritage System.</li> <li>• Less Impact on Agricultural System.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p>

Evaluation Factors and Sub-Factors	Alternative S2-1	Alternative S2-2 - Preferred
Summary of Potential Net Effects and Ranking		
	Impacts a high amount of agricultural lands and System; largest overall impact on designated lands.	Impacts a low amount of agricultural and Greenbelt lands.
2.1.3 Municipal (local and regional) Land Use Planning Policies / Goals / Objectives	<ul style="list-style-type: none"> <li>Does not provide exposure or access to Employment Lands.</li> <li>Low effect on the Norval Secondary Plan.</li> <li>Low effect on the Bram West Secondary Plan.</li> <li>Cannot further reduce impacts to Bram West Secondary Plan or Norval Secondary Plan; moving route south would increase impacts to Bram West Secondary Plan and moving route north would increase impacts on Norval Secondary Plan.</li> </ul> <p style="text-align: center;">MODERATE NET EFFECT <b>RANKING: 2<sup>nd</sup></b></p> <p>Has the greatest impact on agricultural lands as it bisects the lands within the Agricultural System. This alternative does not provide access to employment lands and impacts a portion of the Norval Secondary Plan at the southern point. It has minimal impact on the Bram West Secondary Plan.</p>	<ul style="list-style-type: none"> <li>Provides good exposure for future employment lands.</li> <li>Moderate impact on the Bram West Secondary Plan.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p>Has the least impact on agricultural lands and provides better exposure/ access to employment lands in Halton Hills, but removes a portion of the designated employment lands. This alternative has a greater impact on the Bram West Secondary Plan, but does provide a 400-series highway connection to the area.</p>
2.1.4 Development Objectives of Private Property Owners	<ul style="list-style-type: none"> <li>Likely interest to develop lands but no applications made because of the GTA West Study Area.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">No difference between alternatives.</p>	<ul style="list-style-type: none"> <li>Likely interest to develop lands but no applications made because of the GTA West Study Area.</li> </ul> <p style="text-align: center;">LOW NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">No difference between alternatives.</p>
<b>2.2 Land Use – Community</b>		
2.2.1 First Nation Reserves	<ul style="list-style-type: none"> <li>No reserves in study area.</li> </ul> <p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">No difference between alternatives.</p>	<ul style="list-style-type: none"> <li>No reserves in study area.</li> </ul> <p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p style="text-align: center;">No difference between alternatives.</p>

4.1.3 System performance during peak periods	<ul style="list-style-type: none"> <li>Overall V/C ratios indicate high utilization without exceeding capacity on the freeway, but capacity is exceeded on the 10<sup>th</sup> Line near the interchange.</li> </ul>	<ul style="list-style-type: none"> <li>Overall V/C ratios indicate high utilization without exceeding capacity</li> </ul>
	<p style="text-align: center;">MODERATE PERFORMANCE <b>RANKING: 2<sup>nd</sup></b></p> <p>Analysis indicates slightly lower performance on the local road network</p>	<p style="text-align: center;">HIGH PERFORMANCE <b>RANKING: 1<sup>st</sup></b></p> <p>Analysis indicates slightly better performance on the local road network</p>
<b>4.2 System reliability / redundancy</b>	<ul style="list-style-type: none"> <li>Good opportunities for redundancy on the local road network.</li> </ul>	<ul style="list-style-type: none"> <li>Opportunities for redundancy on arterial road network are limited by the skew of the alternative relative to the arterial roads.</li> </ul>
	<p style="text-align: center;">MODERATE REDUNDANCY <b>RANKING: 1<sup>st</sup></b></p> <p>Neither alternative has opportunities for redundancy on the freeway network, but Alternative S2-1 has better opportunities for redundancy on the local road network.</p>	<p style="text-align: center;">LOW REDUNDANCY <b>RANKING: 2<sup>nd</sup></b></p> <p>Neither alternative has opportunities for redundancy on the freeway network, but Alternative S2-1 has better opportunities for redundancy on the local road network.</p>
<b>4.3 Safety</b>		
4.3.1 Traffic Safety	<ul style="list-style-type: none"> <li>No anticipated safety concerns.</li> </ul>	<ul style="list-style-type: none"> <li>No anticipated safety concerns.</li> </ul>
	<p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p>No discernable difference between the alternatives.</p>	<p style="text-align: center;">NO NET EFFECT <b>RANKING: 1<sup>st</sup></b></p> <p>No discernable difference between the alternatives.</p>
4.3.2 Emergency Access	<ul style="list-style-type: none"> <li>High potential to improve access without reductions to existing access</li> </ul>	<ul style="list-style-type: none"> <li>High potential to improve access without reductions to existing access</li> </ul>
	<p style="text-align: center;">HIGH ACCESS <b>RANKING: 1<sup>st</sup></b></p> <p>No discernable difference between the alternatives.</p>	<p style="text-align: center;">HIGH ACCESS <b>RANKING: 1<sup>st</sup></b></p> <p>No discernable difference between the alternatives.</p>
<b>4.4 Mobility &amp; Accessibility</b>		
4.4.1 Modal integration and balance	<ul style="list-style-type: none"> <li>Opportunities for intermodal connections at transitway station and carpool lots.</li> </ul>	<ul style="list-style-type: none"> <li>Opportunities for intermodal connections at transitway station and carpool lots.</li> </ul>
	<p style="text-align: center;">MODERATE POTENTIAL FOR IMPROVEMENT <b>RANKING: 1<sup>st</sup></b></p> <p>No discernable difference between the alternatives.</p>	<p style="text-align: center;">MODERATE POTENTIAL FOR IMPROVEMENT <b>RANKING: 1<sup>st</sup></b></p> <p>No discernable difference between the alternatives.</p>
4.4.2 Linkages to Population and Employment Centres	<ul style="list-style-type: none"> <li>Improved access to existing and future population and employment areas.</li> </ul>	<ul style="list-style-type: none"> <li>Improved access to existing and future population and employment areas.</li> </ul>
	<p style="text-align: center;">MODERATE ACCESSIBILITY <b>RANKING: 1<sup>st</sup></b></p> <p>Alternative S2-1 provides linkage to Georgetown.</p>	<p style="text-align: center;">MODERATE ACCESSIBILITY <b>RANKING: 1<sup>st</sup></b></p> <p>Alternative S2-2 provides linkage to Georgetown and Brampton.</p>
4.4.3 Recreation and Tourism Travel	<ul style="list-style-type: none"> <li>Provides inter-regional connections from Georgetown.</li> </ul>	<ul style="list-style-type: none"> <li>Provides inter-regional connections from Brampton and Georgetown.</li> </ul>
	<p style="text-align: center;">LOW SUPPORT <b>RANKING: 1<sup>st</sup></b></p>	<p style="text-align: center;">LOW SUPPORT <b>RANKING: 1<sup>st</sup></b></p>

Evaluation Factors and Sub-Factors	Alternative S2-1	Alternative S2-2 - Preferred
Summary of Potential Net Effects and Ranking		
4.4.4 Accommodation for pedestrians, cyclists, snowmobiles, and specialized vehicles	No discernable difference between the alternatives. <ul style="list-style-type: none"> <li>Opportunities to maintain existing routes across the corridor.</li> </ul>	No discernable difference between the alternatives. <ul style="list-style-type: none"> <li>Opportunities to maintain existing routes across the corridor.</li> </ul>
	LOW ACCOMMODATION <b>RANKING: 1<sup>st</sup></b>	LOW ACCOMMODATION <b>RANKING: 1<sup>st</sup></b>
4.5 Network Compatibility		
4.5.1 Network connectivity	<ul style="list-style-type: none"> <li>Flexibility to accommodate future Municipal Road initiatives (i.e. Norval By-pass, Bram-West Parkway).</li> </ul>	<ul style="list-style-type: none"> <li>Flexibility to accommodate future Municipal Road initiatives (i.e. Norval By-pass, Bram-West Parkway).</li> </ul>
	HIGH CONNECTIVITY <b>RANKING: 1<sup>st</sup></b>	HIGH CONNECTIVITY <b>RANKING: 1<sup>st</sup></b>
4.5.2 Flexibility for future expansion	Alternative S2-1 provides s connection to Georgetown. <ul style="list-style-type: none"> <li>Opportunities to expand the freeway and transitway within the proposed right-of-way.</li> </ul>	Alternative S2-2 provides connections to Brampton and Georgetown. <ul style="list-style-type: none"> <li>Opportunities to expand the freeway and transitway within the proposed right-of-way.</li> </ul>
	MODERATE FLEXIBILITY <b>RANKING: 1<sup>st</sup></b>	MODERATE FLEXIBILITY <b>RANKING: 1<sup>st</sup></b>
4.6 Engineering		
4.6.1 Constructability	<ul style="list-style-type: none"> <li>The Credit River Bridge will be on a curve and is longer than other alternatives. Credit River Valley is wider with steeper slopes.</li> </ul>	<ul style="list-style-type: none"> <li>The Credit River Bridge will likely be on a tangent and is shorter than other alternatives.</li> </ul>
	MODERATE POTENTIAL FOR CONSTRUCTABILITY ISSUES <b>RANKING: 2<sup>nd</sup></b>	LOW POTENTIAL FOR CONSTRUCTABILITY ISSUES <b>RANKING: 1<sup>st</sup></b>
4.6.2 Compliance with design criteria	<ul style="list-style-type: none"> <li>The crossing of the Credit River for this alternative is slightly more complex.</li> <li>Conforms to design criteria.</li> </ul>	<ul style="list-style-type: none"> <li>The crossing of the Credit River for this alternative is slightly less complex.</li> <li>Conforms to design criteria.</li> </ul>
	HIGH CONFORMITY <b>RANKING: 1<sup>st</sup></b>	HIGH CONFORMITY <b>RANKING: 1<sup>st</sup></b>
No discernable difference between the alternatives		
4.7 Construction Cost	<ul style="list-style-type: none"> <li>Estimated cost: \$200 to \$310 million</li> </ul>	<ul style="list-style-type: none"> <li>Estimated cost: \$190 to 240 million</li> </ul>
	HIGH RELATIVE COST <b>RANKING: 2<sup>nd</sup></b>	MODERATE RELATIVE COST <b>RANKING: 1<sup>st</sup></b>
4.8 Traffic Operations	<ul style="list-style-type: none"> <li>Volumes indicate some potential for operational issues at the 10th Line interchange.</li> </ul>	<ul style="list-style-type: none"> <li>Volumes and system design have low potential for reduced traffic operations.</li> </ul>
	MODERATE POTENTIAL FOR NEGATIVE EFFECT <b>RANKING: 2<sup>nd</sup></b>	LOW POTENTIAL FOR NEGATIVE EFFECT <b>RANKING: 1<sup>st</sup></b>
Alternative S2-1 has greater potential for operational issues at interchanges. <span style="float: right;">Alternative S2-2 has the lowest potential for operational issues related volumes or non-standard designs.</span>
